OpenCourseWare: It’s not just MIT anymore!

Brandon Muramatsu, Tom Caswell, Shelley Henson

OpenCourseWare (OCW) movement seeks to encourage universities worldwide to freely share their course materials via the Internet. The OpenCourseWare approach works in harmony with national and international copyright law to allow authors to retain copyright of their intellectual property while giving users permission to use, adapt, and redistribute their teaching materials for non-commercial purposes. There are now over 100 higher education institutions and associated organizations worldwide building and supporting OpenCourseWares.

eduCommons is a freely available, open source, OpenCourseWare management system designed to make it easy for institutions to implement and manage an OpenCourseWare. This software helps institutions produce, quality assurance check, and publish course materials. By using eduCommons, institutions will also have direct access to many of the innovative, cross-OCW site tools currently under development. Institutions currently using eduCommons include Notre Dame, the Open University of the Netherlands, Novell, Universidad de Monterrey, and many more.

OpenOCW is a place where individual faculty members can share their openly licensed course materials. This enables individual faculty to participate in the OpenCourseWare movement even if their institution chooses not to maintain its own OpenCourseWare site. OpenOCW will be separated by university and by course to allow contributing faculty members the ability to customize their own courses (e.g., brand the area with their university logo and color scheme). OpenOCW is the next step in making OpenCourseWare available to everyone who wants to contribute.
